

## What Sets Us Apart

### •Experience

Dr. Antosz has been a dentist since 1980, and a Specialist in Orthodontics since 1988. He and his team have some 200 years combined experience in providing orthodontic care. And they are committed to constant improvement of the treatment they provide and the experience of their patients and families.

### •Health-Based Practice

While an attractive and pleasing smile is certainly nice, we look beyond the cosmetic aspects of dentistry to focus as well on overall health of our patients. Healthy jaw function is important, and both treatment and prevention of TMJ or jaw problems is a big part of our practice. We also work hand-in-hand with chiropractors, physiotherapists, speech therapists, and a host of medical specialists (especially ENT) to address other health issues that impact our patients.

### •Invested in Advanced Technology

#### •for superior care

Dr. Antosz has never been shy to invest in technologies if they can improve the care we provide. Over the last 20 plus years we have consistently been one of the first practices to integrate jaw function simulators, digital photography and treatment simulation, digital radiography and computerized tooth modeling. That innovation continues today with integration of iCAT digital 3D imaging and SureSmile digital orthodontic treatment.

#### •for superior patient service and experience

We have spent countless hours constantly reviewing, revising and upgrading our practice systems to make your experience in our practice as pleasant and efficient as possible. After all, your time is your most important commodity - we respect that fact and do our utmost to ensure it's time well spent when you're with us!

### •Dentofacial Orthopedics

Throughout his entire career, Dr. Antosz has been on the leading edge of recognizing that orthodontic problems involve more than simply straightening teeth. He focuses on the whole face and jaw alignment when treating his patients to better balance their facial features and ensure a long-lasting, healthy bite.

### •SureSmile

We are one of the first practices in Canada to implement SureSmile digital orthodontic technology which holds the promise of:

- more precise and predictable orthodontic care
- shorter treatment times
- fewer office visits
- less overall discomfort

### •TMD and Jaw Function

Dr. Antosz's training and experience in this area has allowed us to help thousands of patients in serious pain or whose teeth are failing because of improper bites and jaw function.

- Great Environment for Patients and Families**

A coffee bar, the best hot chocolate in the city, games for the kids (and parents?) are all just a small part of our efforts to make your visit an enjoyable one.

- Patient Parties/ Parent Education**

We've hosted Family Bowling Parties, Movie Nights, Coffee Mornings and many more fun events over the years. We also host our annual Mom's Morning with great speakers on personal and family topics as part of our commitment to our patients and their families.

- Giving Back to the Community**

You name it, we've done it. Sponsoring sports teams or individuals on volunteer missions. Cycling to Conquer Cancer. Supporting outreach centers and shelters for single mothers or women in distress. The list is long and varied, and we're proud of the part we've played over the years.

From the moment you walk into Antosz Orthodontics, you'll know that you've come to a unique and special place - and the right place for your orthodontic care. Our team wants to ensure that you enjoy your visit to the orthodontist. Our practice is fun, comfortable and provides the most technologically advanced treatment options available.
